

VEDLIGEHOELDESESVJLEDNING

Placér din lystage med hovedet nedad på et stykke bagepapir i ovnen på 75°C. Lad den stå i ovnen i 15 minutter. Når lystagen er taget ud af ovnen, tørres den af med en fugtig klud.

Brug aldrig kogende vand, skuresvampe eller andre skarpe genstande til at rengøre lystagen.

Vi yder ingen garanti mod dryppende stearin og anbefaler at lystagerne bruges sammen med Base.

Vi anbefaler, at du ikke lader lysene brænde helt ned i stagen, da dette kan medføre misfarvning eller skader på lakeringen.

CARE INSTRUCTIONS

KUBUS

CARE INSTRUCTIONS

Place your candleholder in the oven at max 75°C upside down on a tray covered with baking paper for 15 minutes. Once the candleholder is removed from the oven, carefully remove wax and dirt with a damp cloth. Please do not use boiling water, scrub sponges or other sharp/scratchy objects when cleaning your Kubus or Line candleholder as this is liable to create surface damage.

We do not provide any guarantee against dripping candle wax on home and office surfaces and recommend using the candleholders together with the Bases for Kubus and Line.

We recommend that you do not let the candles burn the whole way down to the bottom of the candlestick holder as this may discolour or damage the paintwork on your product.
