SHEEPSKIN

Sheepskin is a natural product, which means the color, texture and length of the wool fibres may vary from product to product. Direct sunlight can cause color changes in the wool. In order to preserve the original condition of sheepskin, vacuum clean and air regularly. For more cleaning tips, please see the advice here: <https://skandilock.com/en/care-instructions>

SAXE & STROPP LEATHER

Leather is a natural living material that requires maintenance and becomes even more beautiful if properly cared over time. The changes and stretch in the leather, should be expected and is not seen as a product fault. Take care not to place the leather in direct sunlight and extreme heat. Avoid the use of any cleaning agents and do not use sharp objects on the leather. Be aware that core leather is a very receptive material and hence very responsive for any kind of moisture. The colour will get patina and change over time. To care and clean core leather, please use leather treatment intended to core leather.

SHOEMAKERS STOOL ML42 & SAXE WOOD CONSTRUCTION

For the black variant, soap oak, oiled oak and dark oiled oak, please wipe with a moist cotton cloth. The soap oak version variant can furthermore be treated with vegetable soap flakes. Be very carefully not to hit the leather on Saxe when care with soap flakes to avoid stains. There is a risk of damaging the fragile seat corners of the ML42 i case of overturning. This is not liable for replacement.

CONEXT

When cleaning your Conekt table or Conekt bench, please make sure to clean it with a dry or very slightly damp cloth only.

CONGRATULATIONS ON YOUR NEW BY LASSEN PRODUCT

FRAME

When cleaning your Frame box, please make sure to clean it with a dry or very slightly damp cloth only. Do not use soap or excessive water. Keep your Frame box away from high and low temperatures and extreme changes in humidity. As untreated wood veneer is a living material, it is liable to react when directly exposed to heat, oils, fat, and moisture. Please do not place your Frame box next to or in the flow of an air-conditioning unit or heater as this may cause the veneer to crack.

TWIN TABLES

Due to the very tighen design for twin tables, the tabletops in veneer, cobber and brass are very sensible for any kind of moisture and liquids. Please remove the liquids immediately. How to clean tabletops: For white laminate, oak veneer, black ash veneer tabletops, wipe with a damp cloth. For Copper and Brass tabletops, the materials will develop patina, meaning that the surface of the Twin tabletop will change character because of time and usage. Cobber and brass first develop a dark patina and will later become coated with greenish-blue pigment known as verdigris. To clean brass and copper tabletops simply wipe a dry cloth or use a non-abrasive formulation Brasso. But please note that brass with use of Brasso will become a cooler, more matte color. Make sure that none of the polishing liquid for the burnished copper and brass tabletop touches the reverse side, as this can stain the surface and leave obvious traces on the other tabletop.

TWIN BOOKCASE

When cleaning your Twin bookcase, please make sure to clean it with a dry or very slightly damp cloth only.

REMIX, FIORD, HALLINGDAL, SAHCO ZERO, SAHCO NARA & RAF SIMONS VIDAR 3 (TEXTILE)

Vacuum the fabric regularly. For more cleaning tips, please see the advice here: <https://kvadrat.dk/care-and-maintenance/upholsteries>
